

# Recommendation Letter for Employment

November 10<sup>th</sup>, 2021

To Whom This May Concern,

I am pleased to offer my enthusiastic recommendation of Drew Peterson as Junior Full Stack Developer.

Over the past year Drew has shown himself to be hard working and highly motivated. Always professional, timely, and positive he did it took to make our complex and changing systems deliver what was needed, when it was needed. Drew understands the bigger picture, even if working in the detail, and he contributed significantly to the strategy and direction of the work while taking full ownership and responsibility for all development and implementation. I know Drew will be a great addition to any company or team and will exceed expectations as a developer.

In his time at Save Ohno as Sole Sustaining Developer, he:

- Managed all back-end and DevOps involving Amazon AWS and Heroku,
- Implemented daily adjustments to our PostgreSQL database in Heroku,
- Developed and deployed modifications for new back-end features for our Ruby on Rails application,
- Developed and deployed multiple front-end features, and
- Provided daily technical support to users through multiple channels

In his time here, Drew was quick to research and learn new required technologies and tools. He did outstanding work with no available internal technical support and did an excellent job working independently on all the above responsibilities.

Please do not hesitate to contact me if you should require any additional information.

Sincerely,

 11/14/21

Quentin Prideaux  
CEO
